PROFESSIONAL SUMMARY

Computer Engineering graduate seeking an entry-level Network Engineer position. Knowledge of computer networking, network infrastructure, IP addressing, subnetting, routing, switching, network protocols, Linux and Windows Server fundamentals. Familiar with network configuration, connectivity testing, packet analysis and troubleshooting concepts. Interested in network administration and maintaining reliable network infrastructure.

EDUCATION

Bachelor of Technology in Computer Engineering 2023 – 2026
BVM Engineering College, Vallabh Vidyanagar, Gujarat

Diploma in Computer Engineering 2020 – 2023
VPMP Polytechnic, Gandhinagar, Gujarat

SSC 2019 – 2020
Shree SVP Vidhyalaya, Gondal, Gujarat

TECHNICAL SKILLS

Networking Fundamentals

- OSI Model, TCP/IP Model, LAN, WAN, MAN, Ethernet, Network Topologies, IPv4, IPv6, Public and Private IP Addressing.
- Subnetting, CIDR, VLSM, MAC Address, ARP, ICMP, Default Gateway and Loopback.

Routing and Switching

- Routers, Switches, VLANs, Access and Trunk Ports, Inter-VLAN Routing and MAC Address Tables.
- Static Routing, Default Routing, Dynamic Routing and OSPF Fundamentals.

Network Protocols and Services

- TCP, UDP, DNS, DHCP, NAT, HTTP, HTTPS, FTP, SSH, Telnet, ICMP, ARP, SNMP and NTP.
- Understanding of TCP Three-Way Handshake, DNS Resolution and DHCP Address Assignment.

Linux Administration

- File System Navigation, User and Group Management, File Permissions, Process and Service Management.
- Network Configuration, IP Address Inspection, Log Monitoring and Package Management.
- Commands: ls, cd, pwd, grep, chmod, ps, top, df, free, ip, ss, ping, systemctl and journalctl.

Windows Server Fundamentals

- Active Directory, Domain Concepts, User and Group Management.
- DNS, DHCP, File Sharing, NTFS Permissions, Windows Services and Event Viewer.

Networking Tools

- Wireshark, Cisco Packet Tracer, Ping, Tracert, Ipconfig, Nslookup and Netstat.

NETWORKING PROJECTS

1. Campus Network Design *Cisco Packet Tracer*

- Designed a simulated campus network with multiple departments and separate VLANs.
- Configured inter-VLAN routing and DHCP for communication and dynamic IP assignment.
- Tested connectivity between different network segments.

2. Small Office Network Configuration *Cisco Packet Tracer*

- Created a small office network using routers, switches and multiple end devices.
- Configured IP addressing, subnetting and static routing between different networks.
- Verified communication using ICMP ping.

3. Routing and Switching Lab *Cisco Packet Tracer*

- Practised VLAN creation, access ports, trunk ports and router configuration.
- Configured routing between network segments and tested end-to-end connectivity.
- Used simulation mode to understand packet flow.

4. Network Traffic Analysis *Wireshark*

- Captured and analysed network traffic using Wireshark.
- Examined TCP, UDP, DNS and ICMP packets using display filters.
- Observed TCP communication and DNS request-response behaviour.

5. Linux Network Administration Lab *Linux*

- Practised network configuration and connectivity verification using Linux commands.
- Monitored network interfaces, IP addresses, active connections and running processes.
- Inspected system logs and network-related services for basic troubleshooting.

SOFT SKILLS

- Problem-Solving and Analytical Thinking
- Communication and Team Collaboration
- Time Management and Adaptability
- Quick Learning and Attention to Detail

CERTIFICATION COURSES

1. Networking Basics *Cisco Networking Academy*

- Covers networking fundamentals, network devices, IP addressing, protocols, and basic network connectivity.

2. Getting Started with Cisco Packet Tracer *Cisco Networking Academy*

- Covers network simulation, device configuration, and basic network topology creation.

AREAS OF INTEREST

- Network Infrastructure and Administration
- Network Security and Troubleshooting
- Linux and Windows Server Administration
- Routing, Switching and Cisco Technologies
